Manager discussion for an IACS audience

Accountable autonomous intervention

Connecting behavioral models to observable changes

Sources: Manager spec / Park et al. 2023

Observation, prediction and effect

Three statements require different evidence

Statement	Example	Required support
Observation	The served file matches its digest	Independent readback
Prediction	A policy may improve access	Held-out predictive evaluation
Causal effect	The policy improved access	Credible comparator and uncertainty

Agreement in simulation does not identify a field effect.

Sources: Manager spec / Park et al. 2023 / HeartSteps

A controlled action has separate records

Conceptual contract for the Manager system

Record	What it binds	What it cannot establish alone
Authority	Purpose, target, scope and expiry	Benefit
Execution	Actual authorized operation	Independent world state
Readback	Observed state and source	Human outcome
Outcome	Original units and provenance	Causality without a comparator

A simulation signature remains a simulation artifact.

Sources: Manager spec

The public artifact is verifiable

Recorded verification: 21 October 2026, 14:36 UTC

Behavioral research offers complementary tests

The research map links original work to open questions

Approach	Primary example	Useful test
Adaptive intervention	HeartSteps and JITAI	Availability and repeated outcomes
Multi-arm field experiment	Milkman et al., 2021	Shared comparison and persistence
Recipient outcome study	Haushofer and Shapiro, 2016	Benefit beyond transferred money
Generative simulation	Park et al., 2023	Behavioral fidelity on held-out cases

Sources: HeartSteps / JITAI / Milkman et al. 2021 / Haushofer & Shapiro 2016 / Park et al. 2023 / Researcher map

Public aggregates provide population context

Community Life Survey 2024/25, England adults aged 16+

6.6%

Often or always lonely

October 2024–March 2025

3–9

Indirect loneliness score range

A distinct instrument and unit

Neither figure describes a Manager visitor or estimates a Manager effect.

Sources: Community Life Survey 2024/25 / ONS loneliness guidance

Evidence status for the current prototype

Real delivery and unmeasured human outcomes coexist

Level	Meaning	Current interpretation
P0	Simulation or model/task score	Research evidence
P1	Authentic execution receipt	Action evidence
P2	Independently observed state change	Live artifact verified
P3	Authentic downstream human outcome	NOT_MEASURED
P4	Causal net improvement, costs and harms	Not established
P5	Replication across settings	Not established

Sources: Manager spec / Release record

Open questions for a field evaluation

Model validity

Which held-out outcomes could reject a policy recommendation?

How should uncertainty prevent an unsupported action?

Human outcomes

Who can independently observe the support journey?

How will the study report missing data, harms and unequal effects?

A partner and a prospective protocol are still required.
