Autonomous software for access to public services

Manager

We are building auditable evidence of what changed.

Sources: Pitch evidence / Manager spec

The first customer problem is a hypothesis

Potential beneficiary

A person trying to find the right official route for financial support.

The prototype offers a public navigation page.

Potential customer

An organization responsible for a support-information journey.

Demand and willingness to pay remain unvalidated.

Five consented interviews are still required before the wedge decision.

Sources: MHLW support overview / Provisional wedge

The public artifact is verifiable

Recorded verification: 21 October 2026, 14:36 UTC

6

HTML pages matched

One public product release

16

Public browser checks passed

Software scenarios, not participants

P2 artifact only. Human outcomes remain NOT_MEASURED.

Sources: Release record / Readback CI / Pages run

The demo chooses NO_ACTION

An actual public readback with a deterministic decision

Observed state	Decision	Scope of the evidence
6 public pages match	NO_ACTION	An identical publication adds no new artifact
0 external writes	Keep the existing release	No new field intervention
Human outcome unknown	NOT_MEASURED	No beneficiary or causal-effect claim

The demo records a real observation and a bounded software decision.

Sources: Captured decision JSON / Demo video / Public prototype

The product and business hypotheses

Product value to test

An operator can inspect what the software was allowed to do and what it actually changed.

Human outcomes have their own evidence.

Commercial value to test

A service operator may pay for maintaining and evaluating a support journey.

No validated pricing or revenue claim is available.

The immediate test is a real operator problem and a measurable support task.

Sources: Pitch evidence / Provisional wedge / Simile official site

The next decisive milestones

Each milestone answers an unresolved question

Milestone	Question it answers	Current status
Five consented interviews	Is navigation a material barrier?	Outstanding
An operating partner	Can we observe a real support task?	Not secured
A prospective evaluation	Does a change improve that task?	Not run
A customer commitment	Will an operator pay for the value?	Unvalidated

Current evidence: a live artifact. Human benefit remains NOT_MEASURED.
